Conditional Field Required Validator

Use:

Allows to check that some field is not empty in case some other field has/hasn't some specific value

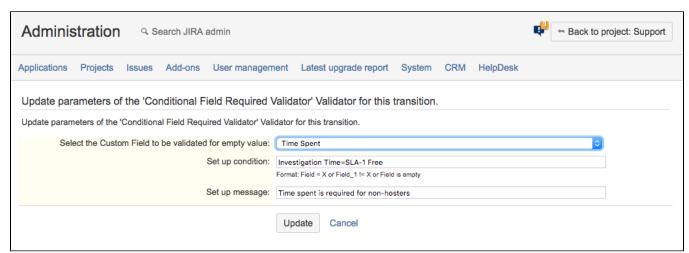

For example: A field "Currency" should not be empty if a field "Amount" is not empty.

Settings:

Field	Description
Select the Custom Field to be validated for empty value	Select issue fields from the list which should not be empty
Set up condition	Type in issue field name and the condition. You can use '=', '!=', '~' operators
Set up message	Type in message to appear if condition is true but the custom field is empty

You can set validator based on SLA field if you have HelpDesk for JIRA add-on. Below you can see the example:

 $Condition \ should \ be \ in \ the \ format: \ Name \ of \ SLA \ field = SLA \ level \ name \ from \ SLA \ Custom \ Field \ configuration.$
